

# E600 GNSS Receiver

The E600 receiver can track all current satellite constellations and signals, including GPS/GLONASS/BEIDOU/GALILEO/QZSS, etc. The new generation of Athena RTK engine effectively improves RTK initialization success rate and initialization accuracy in harsh environments, and supports long-baseline RTK solution, which is an effective guarantee for high-efficiency and high-precision RTK operations.

## Multi-constellation satellite tracked

GPS, GLONASS, BDS, GALILEO, SBAS, QZSS

## Built-in radio supports more protocols

Transmit power 1W, effective working distance is 5km in the optimal work environment.

## Intelligent dual batteries

Support up to 10 hours of work time, battery power can be read directly from the indicator light on the battery, the battery models of handheld device and host are same.

## Built-in 4G network module

Global 4G network module.

## Web UI

Access the Web page, complete the receiver configuration, download data, upgrade firmware, view status, etc. through the mobile phone, tablet and other handheld devices.

## MEMS Tilt Survey

The E600 receiver integrates with MEMS sensor to provide real time tilt survey result. The accuracy of coordinate data can be easily achieved within 60° tilt angle.
